SHE CHOOSES STEM for the future – ERASMUS+

16 April 2024, 10:00 – 12:30 a.m.

The National Research Council of Italy (Consiglio Nazionale delle Ricerche - CNR) is the largest public research institution in Italy, conducting a wide range of scientific and technological activities on different fields.

Women have given and continue to give substantial contributions to scientific and technological research within the CNR, in various positions and roles including researchers, technicians, and administrators.

As in many scientific institutions and organizations in general, challenges for women in achieving equal opportunities, career advancement and fair representation in leadership roles may persist. These challenges may include gender stereotypes, cultural and structural barriers, as well as the balancing of work and family life. The meeting will be the occasion to share views and experiences on these topics.
